

FIBRE ASSORTMENT WITH NO ADDED PFAS

BiOPak
It doesn't cost the earth

European Assortment 2024

BE THE CHANGE YOU DREAM OF

For everything to stay the same, everything must change. At BioPak, we aim to provide people with viable, sustainably designed packaging solutions, making it possible to preserve the planet and achieve commercial success at the same time.

KNOW YOUR BIOPAK PACKAGING SYMBOLS

Here you can see the symbols shown in this brochure and read about what they mean.

DISPOSAL

Compostable

This symbol identifies packaging that is independently certified as either home or industrially compostable according to the standard EN 13432. Industrially compostable certified products will disintegrate within 84 days and biodegrade within 180 days in industrial composting conditions. Certified home compostable products will biodegrade within 365 days in home composting conditions. We list the certification standards and our unique certificate number.

PRODUCT MATERIALS

Responsibly sourced

To ensure our forests are protected forever, we only use raw materials from responsibly managed plantations, including FSC™-certified plantations.

Renewable material

To preserve the planet, we use renewable natural materials, which can be replenished as fast as they are used up.

Recycled material

To limit environmental impact, we use recycled materials. For instance, RPET is made from recycling plastic.

Customisable

To help you grow your brand, our experienced team is here to assist with profile printable products.

New product

To keep our customers ahead of the latest market trends, we keep creating eco-conscious new products. Look out for this symbol.

PRODUCT FEATURES

Stackable

To simplify service and save precious space, we offer a number of solutions that are designed for optimal stackability.

Microwave safe

To ensure you choose the best solution for your menu, we note which packaging is microwave safe.

Oven safe

To ensure you choose the best solution for your menu, we note which packaging is oven safe.

Sealable

Sealable to elevate hygiene and convenience. Suitable for sealing with a Duniform® machine.

Antifog

To ensure delicious-looking displays and rewarding customer experiences, we offer a selection that resist condensation.

BETTER FOR THE PLANET

When you choose BioPak packaging, you choose a brighter vision for the planet. We provide a broad range of recyclable solutions made from renewable, OK Compost-certified and FSC™-certified materials. Compared to conventional alternatives, these offer a lower carbon footprint and reduce the use of fossil-based plastic. Even better, they point the way to a more socially responsible world.

GOOD FOR BUSINESS

The circular economy can only become a reality if we, as a society, create business tools that are both viable and sustainable. At BioPak, we never lose sight of this fact. That's why every solution we offer combines environmental thinking with outstanding design, superior quality and proven materials. What's more, we match our packaging with services like our best-in-class profile print offer.

OUR PRODUCTS

For packaging material, the carbon footprint of the product is consistently lower than for the goods they protect. For plastic products, transportation typically represents less than 10–15 % of the overall footprint, also when shipped from China to Europe. Calculations show that for BioPak products with the same use, sugarcane fibre and paper products have the lowest carbon footprint.

THERE IS NO PLANET B

BioPak started life in Australia as a group of pioneers with a powerful vision: to make the best eco-conscious packaging on the market. Now part of Duni Group, we act as trusted partners to foodservice professionals across the globe. As we push on with our mission, we comply with the ISO Environmental Standard and certify that most of our ranges are either home and/or industrially compostable.

PRODUCTS NOW PRODUCED WITH NO ADDED PFAS

Find out why we're removing PFAS from all BioPak packaging and how it impacts your food service.

Full production stop as of January 1st, 2024

PFAS has been an industry standard for bagasse products for its ability to prevent oil and grease from leaking through food packaging. But the recent unearthing of the substance's negative effects has led to regulations on its use and an uptick in national bans.

The impact on people and the planet – coupled with PFAS bans – made us put a full stop on the production of products with added PFAS on January 1st, 2024. To keep communications clear and transparent, we have changed article numbers on affected products.

How will it affect you?

PFAS has been found in most of our bagasse products as well as some grass paper articles. While there is no tactile or visual difference between products with and without added PFAS; there's a difference in how they perform – especially in contact with very wet and greasy food.

Bagasse is a sustainable and rapidly renewable material with a low carbon footprint, but it's not a natural repellant. Through extensive research and development, we've developed an alternative oil-based barrier solution to replace the PFAS additives previously used. The shift away from PFAS has resulted in new performance profiles and recommended uses for our bagasse products. As such, it's important that you pair your food with the right products.

What is PFAS?

PFAS (Per- and polyfluoroalkyl substances) is a large and complex group of over 10,000 identified substances that hold the ability to repel water and grease as well as withstand high temperatures. Although PFAS is widely used in anything from raincoats to frying pans and firefighting foam; it's been uncovered as a "forever chemical" that can contaminate soil and water.

RECOMMENDED USE NO ADDED PFAS

Pair your food with the right boxes and bowls to get the best use out of the non-added PFAS assortment.

CUBE

Combining simplicity and functionality, Cube is a timeless classic. The square and rectangular shapes are perfect for efficient space utilization and the rounded edges add a sophisticated look. Made from renewable bagasse, the boxes can be recycled after use. Cube can be used safely with all types of hot and cold food and thanks to an extra secure lid closing, it ensures the best possible food protection. Transparent lids made from 100% post-consumer recycled PET (RPET) with an anti-fog feature to prevent condensation are available when clarity is a priority. The coated Cube range features an ultrathin PBAT/PLA coating designed to withstand greasy food, long-term storage and microwave reheating.

Our Cube range is produced without any added PFAS – just like all our plates and bowls.

ESSENTIAL PLATTER

The Essential platter concept is a sustainable catering solution, combining a bagasse platter with a lid made from 100% recycled PET. With its close-fitting lid and clever stacking feature, it's the ideal solution for easy handling and secure transportation.
